European Technical Assessment ETA-15/0068 English translation prepared by DIBt

## Specific Part

#### **Specific Part**

### 1 Technical description of the product

The MB / MBR is a plastic anchor consisting of a plastic sleeve made of polyamide and an accompanying specific screw of galvanised steel or of stainless steel.

The plastic sleeve is expanded by screwing in the specific screw which presses the sleeve against the wall of the drilled hole.

The product description is given in Annex A.

# 2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this ETA is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

#### 3 Performance of the product and references to the methods used for its assessment

#### 3.1 Safety in case of fire (BWR 2)

| Essential characteristic | Performance   |  |  |
|--------------------------|---------------|--|--|
| Reaction to fire         | Class A 1     |  |  |
| Resistance to fire       | See Annex C 1 |  |  |

#### 3.2 Safety and accessibility in use (BWR 4)

| Essential characteristic                              | Performance           |
|---|-----------------------|
| Characteristic resistance for tension and shear loads | See Annex C 1 – C 4   |
| Characteristic resistance for bending moments         | See Annex C 1         |
| Displacements under shear and tension loads           | See Annex C 1         |
| Anchor distances and dimensions of members            | See Annex B 2 and B 3 |

# 4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with guideline for European technical approval ETAG 020, March 2012 used as European Assessment Document (EAD) according to Article 66 Paragraph 3 of Regulation (EU) No 305/2011 the applicable European legal act is: 97/463/EC.

The system to be applied is: 2+

# **European Technical Assessment** ETA-15/0068

| MB10/ xx<br>MBK10/ xx     | 10                  | 70/ 90 <sup>4)</sup>     | 80, 100, 120,<br>140, 160, 200,<br>240, 280, 300 | 7       | 6,1                           | 75     |  |  |

1) For the anchor's description the plastic sleeve's length  $I_d$  is indicated additionally, e.g. for  $I_d$ =140 mm: anchor MBR 10/140.

2) The screw's length  $I_s$  amounts 5 mm longer than the plastic sleeve's length  $I_s$ , so the fastener penetrates correctly the appropriate plastic sleeve.

3) For attached metal parts the fastener with hexagonal drive may be used in the version zinc plated. See section 1.

4) When applied in autoclaved aerated concrete an embedment depth of 90 mm has to be used.

## Table A2: Materials

| Name           | Material   |
|----------------|--|
| Plastic sleeve | Polyamide, PA6, colour orange  |
| Specific corow | steel 6.8 ( $f_{uk}$ = 600 N/mm <sup>2</sup> , $f_{yk}$ = 480 N/mm <sup>2</sup> ), zinc plated ≥ 5µm acc. to EN ISO 4042:2001-01 |
| Specific screw | non-corrosive steel A4 EN 10088-3:2014 mit $f_{uk}$ = 700 N/mm² , $f_{yk}$ = 450 N/mm²   |

| ) Note: TI   | ne characteristic resistance is also valid for larger brick sizes and h                               | igher compress | ive strength. | •      |  |

<sup>2)</sup> Clay bricks, calcium silicate bricks and concrete - or lightweight concrete blocks and mortar strength class≥ M2,5 acc. to EN 998-2:2010

<sup>3)</sup> For other base materials of the use categories b, c and d the characteristic resistance of the anchor may be determined by job site tests according to ETAG 020, Annex B, Edition March 2012.

#### Use conditions (environmental conditions):

· Structures subject to dry internal conditions (zinc coated steel, stainless steel).

- The specific screw made of galvanised also may be used in structures subject to external atmospheric exposure, if the area of the head of the screw is protected against moisture and driving rain after mounting of the fixing unit in this way, that intrusion of moisture into the anchor shaft is prevented. Therefore there shall be an external cladding or a ventilated rainscreen mounted in front of the head of the screw and the head of the screw itself shall be coated with a soft plastic, permanently elastic bitumen-oil-combination coating (e. g. undercoating or body cavity protection for cars).
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist (stainless steel).
   Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used).

#### Design:

- The anchorages are to be designed in accordance with the ETAG 020, Edition March 2012, Annex C under the responsibility of an engineer experienced in anchorages and masonry work.
- Verifiable calculation notes and drawings shall be prepared taking account of the loads to be anchored, the
  nature and strength of the base materials and the dimensions of the anchorage members as well as of the relevant tolerances. The position of the anchor is indicated on the design drawings.
- Fasteners are only to be used for multiple use for non-structural application according to ETAG 020, Edition March 2012.

#### Installation:

- Hole drilling by the drill modes according to Annex C1 C4
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site acc. to annex B 4 and B 5.
- Installation temperature from -20°C to +50°C
- Exposure to UV due to solar radiation of the anchor not protected ≤ 6 weeks
