What We Do Differently

We source from a single, ISO 9001 Certified Taiwan Factory to make sure you are getting quality material that is consistent and traceable.

But we go further...

- Manufactured using premium grade wire, (2.65mm core material)
 - H9 heading punch changed every (80,000m to 90,000m)
 - Heading dies changed every (1m to 1.5m) creating a consistent, high quality head
 - Thread rolling dies changed (1m to 1.2m) for fine thread, (1.5m) for coarse thread
- ensuring superior thread sharpness on each and every screw

Pro drive recess for tighter bit engagement equals less wobble and cam-outs for faster install times. Preferred average is 3X FASTER than industry standard

Quality controlled heat treating greatly reduces product failure and head shear off

Superior point and thread sharpness for faster penetration and install times with every Preferred screw

Premium grade steel for ultimate performance and product reliability

What the PROS say...

"Preferred makes some simple, but profound changes, including a sharper tip to get the drive started. It's the consistency in the quality that really sets them apart, though.

Changing the dies out earlier than necessary cost more, but it means you'll get an exact fit every time."
