October 16, 2020

Dear valued Distributor,

The US Anchor Division of Brighton Best International is pleased to announce the addition of Taping HD, heavy duty concrete screw anchor.

It is code listed under IBC/IRC in accordance with ICC-ES AC193 and ACI 355.2 for cracked and un-cracked concrete.

It features its patented “triple thread” design that makes installation more stable. This heavy duty design is ideal for use when you need to anchor closer to an edge. It also has the capability of being removable and reusable.

The typical applications include:

Racking/conveyors/railings/stadium seating/handrails and shelving.

The Taping HD is installed utilizing standard ANSI standard carbide bits. The anchor size is equal to the drilled hole size. Each anchor has a length and diameter code stamped on the head of each anchor. They are available from 3/8” diameter through 3/4” diameter with lengths up to 10”.

The Taping HD anchor line is available through one of our convenient national warehouses. This is a highly engineered anchor, code approved and available for immediate shipment.

Please contact me if you have technical questions or desire support documents.

Regards,

Jim Hahn
US Anchor Product Manager
